X, P or A Waste Collection Form

Advisor:

_____ pH (if aqueous): ______

Before starting a new waste container, complete and **check off** the following:

- Waste in this category must be collected in 500 mL or smaller bottles. Inspect the bottle for cracks or flaws; DO NOT use if any are present. Make sure the cap fits tightly and that the bottle is clean.
- □ Place a "hazardous waste" sticker on the bottle and label it clearly as aqueous, halogenated, or nonhalogenated waste using a permanent marker.
- □ Place the bottle in a sturdy secondary container.
- □ Ensure that this Waste Collection Form is posted with the bottle.

Fill out the table below each time you add waste. List ALL chemicals added.

Solvent(s): _____

Chemical name of solute	Toxicity category (X, P, A, B, C or D)	Give	Give the mass of each chemical added (round to nearest mg)					

When the waste reaches the point at which the bottle begins to narrow, have your advisor sign and date the waste sheet, attach it to the bottle with tape, and bring it to 608 in a bucket or on a cart.
